### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tolson (US 5,787,682) in view of Suga (US 4,571,927).

In claim 1, Tolson discloses the invention as claimed including frame 12, conveyor 20 driven by motor (not shown) and sprockets 22, products "P" transported on the conveyor, heat source 40, generating hot air, a plurality of nozzles 32 oriented toward the bottom of the conveyor, the heat source and nozzles fixed to each other and controller 14, which controls the nozzles so that hot air can follow a package to seal it (see figures 1, 2, 8, col. 3, line 66 – col. 4, line 46 and col. 5, line 30 - col. 6, line 18).

What Tolson does not disclose is the use of closing members which direct hot air. However, Suga teaches that it is old and well known in the art of packaging to provide a sealing device with a closing member 90, which rotates between a first and second position for the purpose of directing hot air onto a sealing area (see figures 8, 9 and col. 5, lines 2-28).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the invention of Tolson with the

Art Unit: 3721

closing member as taught by Suga for the purpose of directing hot air onto a sealing area.

In claim 2, the modified invention of Tolson through Suga teaches that it is obvious to one having ordinary skill in the art at the time the invention was made to provide moving means 90, which pivots to allow hot air in relation to an axis which is substantially parallel to an axis formed by a conveying plane (as shown by the arrows in figure 9).

In claims 3 and 4, the modified invention of Tolson through Suga teaches that it is obvious to one having ordinary skill in the art at the time the invention was made to provide a conduit (generally 64), aligned with an outlet and arm (generally pivot 91), connected to the moving means to allow movement.

### ***Allowable Subject Matter***

3. Claims 5 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Conclusion***

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to PAUL R. DURAND whose telephone number is (571)272-4459. The examiner can normally be reached on IFP.
